

## EVALUATION LETTER

02/12/17

To whom it may concern,

This letter is to confirm that Hieu Vu Minh Phan, a student in the Bachelor degree of Computer Science program at university of Wollongong, New South Wales, Australia, served as an intern in Ascenx Technologies (Vietnam), Department of Engineering from December 12 2017 through February 10, 2018. Hieu was specifically assigned during his tenure to continuously improve the web application for an IoT system that collects data from customer world-wide depots.

During his time in Ascenx Technologies, Hieu had finished every task on time and showed a very professional working attitude. His ability of researching, technical problem solving and coding techniques exceeded my expectation, which contributed enormously to the success of the project.

He has demonstrated a good working knowledge and practices on PHP, Java scripts and SQL programming.

In particular, his new developed features for the web interfaces has been well acknowledged by our customers. Not only that, he also contributed on an internal project for developing web crawlers to collect useful data of available products on multiple websites at once. It helps to reduce significantly the burden of other engineers on spending time searching on the Internet.

We have been very pleased with the work Hieu has accomplished in his internship with the department. He has been a pleasure to work with.

If I can provide you with any additional information, or if you have any questions regarding Hieu's work with this department, please do not hesitate to contact me.

Sincerely,

Tam Duong

Design Service Engineer
